More reasons to smile

Straight teeth and a megawatt smile can be yours – all without uncomfortable and unsightly metal braces.

Every woman knows that a smile can make or break that first impression. And transforming your smile can further enhance your appearance. A beautiful smile not only makes you look good, you'll also feel more confident and enjoy better oral health too. After all, smiling is said to release endorphins that boost your immune system.

Self-conscious about your teeth? It's never too late to straighten them. And no, it doesn't have to be uncomfortable or involve wearing metal braces either. The secret is Invisalign, an alternative dental treatment to braces involving a series of clear and removable custom-made aligners. Whether your teeth need a little or extensive treatment, Invisalign's discreet and effective technique can move teeth into their desired position in six to 24 months.

Still not convinced? Here's how Invisalign scores in terms of aesthetics, comfort and convenience over conventional braces.

1. THEY MAKE YOU LOOK GOOD

Invisalign aligners are almost invisible, so no one knows you are wearing them. Unlike conventional braces where brackets, wires and bands can be seen, Invisalign allows you to still look your best – especially if you are self-conscious and concerned about maintaining your professional image.

2. THEY FEEL MORE COMFORTABLE

Made of medical-grade polymer, Invisalign aligners are custom-made to sit snugly on your teeth without irritating the gums. So sharp edges, soreness and bruising, which are common with other forms of teeth-straightening treatment, are the least of your worries.

3. THEY FIT IN WITH YOUR LIFESTYLE

You require fewer visits to your dentist or in this case, Platinum Elite Providers of Invisalign who have the most experience with the technique – based on the number of patients treated. Invisalign aligners are removable, which means minimal disruption to your busy lifestyle. Unlike other braces that are permanently fixed until treatment is complete, you can enjoy meals without food restrictions or worrying about trapped food particles. You can also maintain your regular brushing and flossing routine, so your teeth and gums continue to be healthy throughout treatment.

Health benefits of straight teeth

- > Better oral health. Straight teeth are easier to clean, so they reduce long-term risk of dental cavities, gum disease and bad breath.
- > Improves bite and speech function. You can bite, chew and speak more effectively.
- > Less stress on teeth. When your biting force is balanced, you reduce abnormal wear patterns, and even headaches or facial pains.
